

The logo for Titan Rescue Pole features a red and black rectangular background. The word "Titan" is written in white on a black background, and "Rescue Pole" is written in red on a black background.

**Titan**  
**Rescue Pole**

Don't put yourself at risk trying to help a colleague without the right equipment. Talk to us today about the Titan Rescue Pole.

Rescue Pole Components

Working at heights? Have you ticked all your safety requirements?

Harness?  Lanyards?

Training?  Rescue Pole?

As part of your ongoing OH&S commitment, you already have policies, procedures and equipment in place to protect your staff when working at heights. But have you given consideration to what needs to be done in the unfortunate event that a team member is left suspended following a fall?

The lightweight, portable **TITAN RESCUE POLE** is designed to make a rescue fast, safe and efficient whether being carried out by a trained rescue professional or by a person who would not normally be called on to do this as part of their day-to-day job.

As the **TITAN RESCUE POLE** does not involve complicated knots or mechanical procedures, it is extremely simple and safe to use. All that is required is for the operator to do the following:

1. Remove the system from its storage tube and release the velcro straps
2. Insert the karabiner into the clip on the extension pole
3. Attach the pulley system to an anchorage point
4. Extend the pole and pulleys as required
5. Slip the karabiner through the harness D-ring and pull to release from the pole
6. Use the free end of the pulley system to raise or lower the person
7. Pack the system away in readiness for next time

Extended Pole and Pulley System
